SUMMARY

Fullstack Developer focused on delivering high-quality web solutions, continuously improving my skills through diverse software projects. I strive to create impactful applications that meet business goals, while fostering collaboration and driving efficiency in every project.

WORK EXPERIENCE

Backend developer, Macropay

Mar 2024 - Present

- Implementation of APIs with NestJS for building new systems for the company.
- Optimization and maintenance of systems developed with Spring Boot and Angular, improving application performance and implementing new features.
- Implementation of unit tests to verify the correct functioning of the projects.

Fullstack developer, BlackSpot

May 2023 - Mar 2024

- Participation in the planning and development of new projects to be undertaken.
- Maintenance and implementation of new features using Laravel and Livewire, supported by Webflow for the UX/UI development of the projects.
- Reduction of errors and development time through team organization using the Scrum methodology.

Fullstack developer, Freelancer

Since 2022

- Creation of tools for supporting and automating business processes.
 - Assistance in teaching and project development, using technologies like JavaScript and .NET for web development and desktop applications.
-

EDUCATION

Computer Systems Engineering

Universidad Privada de la Península

- Course focused on software development and the application of engineering for problem-solving.

Industrial Maintenance Relative Degree

Universidad Tecnológica Metropolitana

- Course related to the maintenance of industrial equipment and quality methodologies for process and equipment improvement.
-
